

# Ipswitch WS\_FTP Server

## The Smarter Way to Transfer Files

Ipswitch WS\_FTP® Server is a highly secure, fully featured and easy-to-administer file transfer and data management server that makes important data easily and securely accessible by managing and protecting folders and files and communicating securely with FTP clients. WS\_FTP Server is used by administrators globally to support millions of end users and to transfer billions of files and petabytes of data.

### Security ensures the safe storage, sharing and transfer of files

Powerful security includes 128-bit encryption over SSL protocol, login authentication encryption, digital certificate management and the ability to force minimum encryption levels on client connections.

### Powerful administrator control over server access and user permissions

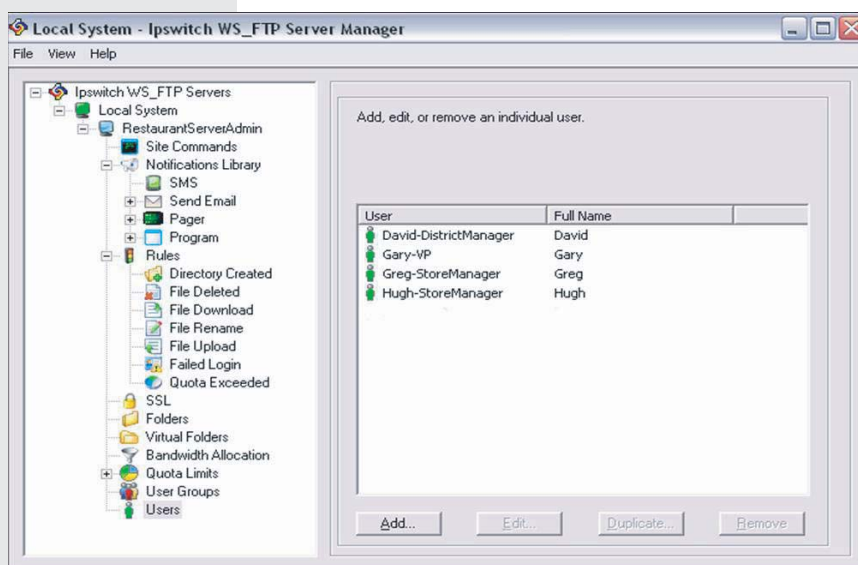

Define access to files with permissions by folder, user, group, and host and set limitations on storage space, file count and bandwidth utilization. Administrators can fine-tune server access and file transfer privileges to ensure that everyone has access to the data they need when they need it, while making certain that files are kept out of the wrong hands. Leverage existing user databases, including Active Directory, NT or an ODBC database, for integrated and secure authentication.

### Trigger communication and workflows based on server events

Powerful rules engine can automatically trigger email, SMS and pager alerts and launch external programs based on specified server events. Easily create rules for event-driven notifications and automation based on failed user logon attempts or server events such as creating a directory, exceeding quota and uploading a file.

### Log client-server and administrator activity for monitoring and auditing

Keep an ongoing record of server usage and capture all actions related to the storage and transfer of files. Compile a detailed and granular record of end user activity, including who connected to the server, what was transferred and when it occurred.

### Exceed compliance and corporate governance requirements

WS\_FTP Server enables compliance with government regulations, company policies, vendor requirements and customer expectations for secure file transfer. WS\_FTP Server exceeds the requirements of many compliance regulations worldwide, including HIPAA, Sarbanes-Oxley, PCI DSS, BASEL II and J-SOX.
